

Smart Grocery: Scenario Release 2

Group 3: Umar Khan, Bilal Naseer, Daniyal Khan, David Cardenas

Intro: Release 2 of the Smart Grocery app deepens the user experience, refining the onboarding process and expanding the app's feature set. This scenario builds upon the foundation laid in Release 1, introducing advanced capabilities and ensuring that the application remains at the forefront of culinary innovation.

Advanced User Profile Setup: Upon opening the Smart Grocery application, returning users are prompted to enhance their profiles with additional details. New users can now add favorite cuisines/preferred cooking methods. This helps the app provide a more personalized experience.

Virtual Pantry: One of the significant new features in this release is the "Virtual Pantry." Users can:

- Manually add items they already have at home.
- Scan items to automatically add them to the pantry.
- Set expiration dates for perishable items, with notifications alerting them as the date approaches.
- View suggested recipes based on the items in their pantry, ensuring minimal waste and more creativity in the kitchen.

Recommend Feature: Building on user preferences and the items in the Virtual Pantry, the "RECOMMEND" command:

- Users receive recipe suggestions tailored to their profile and the items they have on hand.
- The app suggests grocery items that complement their existing pantry, ensuring they always have a diverse range of ingredients.
- Based on popularity, Users get suggestions for trending recipes

Advanced Navigation and Filtering: To accommodate the expanded feature set, the app introduces improved navigation and filtering options:

- Filters in recipe browsing allow users to select for specific dietary needs, cuisines, or cooking methods.

- The "ADVANCED SEARCH" command lets users delve deeper, searching for recipes by name, cuisine, and most ingredients already owned

Enhanced User Interaction: Feedback from Release 1 has been incorporated, refining the user experience:

- When Users click on a recipe, they can see what ingredients they already have
- A "HISTORY" command allows users to revisit previously viewed recipes and grocery items.
- User feedback is actively solicited through a "RATE" command, ensuring continuous improvement

Exiting the App: As in Release 1, upon deciding to exit the application, users encounter a screen that thanks them for their time.

Conclusion: Smart Grocery Scenario Release 2 augments the user experience, making the culinary journey more intuitive, personalized, and engaging. The additions of the Virtual Pantry and the enhanced Recommend feature solidify the application's position as an indispensable tool for modern cooks.
